

Superscript #	Subject Superscript	Description																
1	Signs of insulin resistance	<ul style="list-style-type: none"> Hypertension Dyslipidemia (<HDL; elevated non-HDL; elevated TG/HDL ratio) Acanthosis Nigricans/Skin tags Polycystic Ovarian Syndrome 																
2	Selective screening in high-risk populations	<p>Racial/ethnic groups ranked from most to least at-risk for prediabetes and diabetes due to genetic and environmental factors:</p> <ul style="list-style-type: none"> Native American (most at-risk) African American Hispanic Asian American Pacific Islander (least at-risk) 																
3	American Diabetes Association lab-based classifications for normal, prediabetes, and diabetes ranges	<table border="1"> <thead> <tr> <th></th> <th>Normal</th> <th>Prediabetes</th> <th>Diabetes</th> </tr> </thead> <tbody> <tr> <td>HA1C</td> <td>< 5.7%</td> <td>≥ 5.7% and ≤ 6.4%</td> <td>≥ 6.5%</td> </tr> <tr> <td>FPG</td> <td>< 100 mg/dL</td> <td>≥ 100 to 125 mg/dL</td> <td>≥ 126 mg/dL AND diabetes symptoms</td> </tr> <tr> <td>2-hr OGTT</td> <td>< 140 mg/dL</td> <td>≥ 140 to 199 mg/dL</td> <td>≥ 200 mg/dL</td> </tr> </tbody> </table>		Normal	Prediabetes	Diabetes	HA1C	< 5.7%	≥ 5.7% and ≤ 6.4%	≥ 6.5%	FPG	< 100 mg/dL	≥ 100 to 125 mg/dL	≥ 126 mg/dL AND diabetes symptoms	2-hr OGTT	< 140 mg/dL	≥ 140 to 199 mg/dL	≥ 200 mg/dL
			Normal	Prediabetes	Diabetes													
		HA1C	< 5.7%	≥ 5.7% and ≤ 6.4%	≥ 6.5%													
		FPG	< 100 mg/dL	≥ 100 to 125 mg/dL	≥ 126 mg/dL AND diabetes symptoms													
2-hr OGTT	< 140 mg/dL	≥ 140 to 199 mg/dL	≥ 200 mg/dL															
Children with FPG values between 86-99 mg/dL have 2 times the risk for developing diabetes and 3.4 times the risk for developing prediabetes as an adult regardless of weight status.																		
4	HA1C as a primary screening tool	<ul style="list-style-type: none"> AVOID screening with HA1C in the following patients: <ul style="list-style-type: none"> HbSS, HbCC, and HbSC due to associated anemia, increased red blood cell turnover, and rigorous transfusion requirements that distort A1C reading Anemia due to risk of falsely high reading Iron deficiency due to risk of falsely high reading Heavy (menstrual) bleeding due to risk of a falsely low reading Kidney failure Liver failure Hemoglobinopathies (i.e. thalassemias) 																
5	Lifestyle interventions	<ul style="list-style-type: none"> Nutrition: Create tailored dietary prescription with monthly follow-up. Weight management: <ul style="list-style-type: none"> Primary goal: weight maintenance Secondary goal: loss of 0.5-1 kg per month in growing patients OR 0.5-1 kg per week in post-pubertal adolescents to achieve 5% to 10% weight percentile drop OR < 85th percentile for BMI Exercise: <ul style="list-style-type: none"> Aerobic exercise 1-hr daily (walk, run, team sports, bike, hike, etc.) Strength exercise 3X per week <ul style="list-style-type: none"> ✓ Body weight exercises such as push-ups, planks, sit-ups, and squats are recommended for children and adolescents ✓ Resistance band, light free weight, and light weight machine exercises are recommended in adolescents with proper training Behavior: <2 hours of non-academic screen time is recommended 																
6	Utility of the 2-hr OGTT	The 2-hr OGTT is not a preferred screening test due to limited feasibility, costliness, and the burden it imposes on patients.
